Wholehog 3 v2.1 Release Notes

Version: 2.1 (1618) March 5, 2007

New Features

Version 2.1 contains major enhancements to the following areas: views and windows, undo, slotted parameters, Hog 3PC, networking, expansion wing, and playback. In addition, significant changes to the underlying software engine and routines result in improved system performance and reliability.

Version 2.1 (build 1618)

Improved Views and Windows

This version contains many improvements the speed and usage of views and windows, particularly on the full console.

Improved Hog 3PC UNDO Functionality

Hog 3PC now has the same Undo capabilities as the console.

French Language Help added

This version contains French language Help

Console and Rack Mount Unit Keyboard Shortcuts

The console and rack mount unit now use the Hog 3PC methodology for keyboard shortcuts.

Smaller sized ISO downloads

The ISO download for the Wholehog 3 console is now streamlined to contain only the files required for the console. Users wishing to download separate files for Hog 3PC, visualizer connectivity drivers, etc can still do so on the Flying Pig Systems website. Shipped CDs will still contain all Wholehog 3 software products on a single disc.

Wholehog 3 v2.1 (Build 1618) Bug Fixes

Bug Fixes as of March 5, 2007

Views and Windows

5200 Recalling views can take 3-4 seconds
5219 Views + Cuelist during Playback doesn't redraw
5242 Can't access "Apply/OK" buttons on HogUnit with display at 800x600
5984 Cuelists appearing blank on view recall
5985 Recalling views clogs up FP, redraws pointlessly
6476 Cannot Save View with No Windows Open
7028 Screen Distortion in Views Directory Window
7223 Cursor can exist in two cells when scrolling the cuelist window
7828 Control / Enable / Mode toolbar appears in wrong place
7893 Auto Palettes generate window too short - buttons cut off
7980 path options are inaccessible in certain views
7987 Cuelist window path drop-down sometimes opens without data
8006 Maximized windows restore size when moved to a different screen
8133 view timecode button should remove toolbar when clicked again
8161 view change causes DMX stall
8334 Cannot Use Toolbars With Modal Window Open
8431 Cannot Use Front Panel With Modal Window Open
8535 Sandwiched Parent Window Will Not Front
8804 The Fixture window does not regain focus after the Patch window is closed
8878 PC - Default Positions should restore minimized windows.
8902 PC - a window opened on external monitor 1 or 2 will default to that position when opened again when external monitors have been configured OFF

Wholehog 3 v2.1 Bug Fixes *(continued)*

Views and Windows *(continued)*

8903 Many Hog3 windows need a better method of handling resizing
8911 Some toolbars are too narrow
8970 PC - Splash Screen always on top causes problems
8973 PC - single click + double click on screw closes window
8989 Cuelist and Programmer WIndows not in focus when view is recalled
9111 Opening & Closing the Control Panel leaves zombie processes
9650 Event Monitor opens behind Parent Windows
9799 PC: DMX Output window is blank
10011 Patch @ will not work if another window is opened after the fixture window
10076 Column headers don't redraw properly after sorting
10148 Cannot confirm some dialogs using enter button
10153 Eight editors open will crash desktop
10206 Toolbars should be forced to an enabled monitor when drawn
10283 Show merge window should be semi-modal
10284 Quickname dialog should open on primary screen
10285 Output Window - Corner area where scroll bars meet doesn't redraw properly
10286 Output Window (compact) - Aggregate headers don't draw properly
10391 DP drop down menu toolbar should never shrink in size
10436 Playback bar can fail to redraw when fronted by other windows in Windows XP

Undo

8558 PC: Undo not working for some actions
10110 3PC: Undo does not work for slot toolbar edits or P/T edits
10301 Undo not working properly for Positions edits that contain extreme P/T Values

Slots

2964 IPCB Scenes and Manually Xfades won't linearly fade slotted parameters properly
10049 Change type handles slots with offsets incorrectly
10090 Slotted parameters jump when starting a crossfade from offset
10209 Cloning handles slots with offsets incorrectly
10230 Slotted parameters jump state when changing the fade time of a cue
10254 Autopalettes apply slot information without offset
10256 Slotted parameters always fade linearly with manual Xfades and IPCB Faders.
10271 Touching cloned slot parameter reveals an offset that should not have been copied
10278 Slotted parameter jumps while executing a transparent cue after change type

Hog 3PC

8825 PC, iPC- Error when creating new show after upgrading
8876 PC - Front Panel position not remembered
8931 PC: Plus and Minus do not work when keyboard shortcuts are disabled
9360 PC - Command line unresponsive after multiple palette selections
9495 PC: Console Settings appear to go back to old settings when hitting apply
9496 PC: Open Timecode Toolbar Macro works but does not change state of view timecode button
9818 Update Hog iPC Handbook
9889 Pressing ESC key while Launched Processes Window is Open Crashes Hog3PC
10069 Need better error handling when launching Hog3PC with all network adapters disabled
10111 PC encounters an error when pressing letters in virtual keyboard
10259 PC "Patch at" window not centered

Wholehog 3 v2.1 Bug Fixes *(continued)*

Hog 3PC*(continued)*

10349 Hog 3PC throws toolbars out of minimized parent windows on launch
10378 PC - Startup Macro Unknown Exception
10436 Playback bar can fail to redraw when fronted by other windows in Windows XP
10486 Opening directories with both parent windows minimized crashes

Networking

9073 IOP - Server Busy Error when using Clone Universe on client console
9106 Poor client performance on adding fixtures
10027 masters on networked consoles don't properly un-solo
10070 Invalid IP configuration will lose adapter
10075 When a client logs off a show the data in the client's programmer should be cleared from output

Expansion Wing

7304 integrity of wing beacon
9182 MiniWings Test Fails
9843 After exiting the X-Wing Application you should have to pass through last fader level before taking control
10002 X-Wing needs indication of masters held-over from a previous page
10012 Expansion Wing does not indicate Template page items
10190 Expansion Wing - Cannot control Enable LED from Control Surface test app
10191 Expansion Wing - Cannot control LED / Desklight levels from Control Surface test app

Playback

8363 using RA trigger macro hangs playback & desktop process
9658 Faders do not update while using SOLO
9689 Cuelist Add release end cue problems with HTP
9898 Fader always locks on page change if cuelist/scene intensity is at 0% but other parameters are active
9940 loop with follow cues with "Action of go when looping" set to "go next" crashes participating OBs
10006 Flashing multiple solo cuelists locks solo on
10007 Cue Only HTP cuelist plays incorrectly
10215 RO trigger macro hangs playback & desktop process
10248 Cuelist Reset on Release problems with HTP
10380 Loop count will fail if the loop was previously played as a forever loop

System Maintenance

9774 Create Smaller ISO image for Downloads
9778 Messaging rearchitecture
10035 Refresh loop iteration. Iterate by playback top level.
10117 Exceptions caught in GutApplication message routing hang the message pump
10188 OB Playback thread spins CPU
10249 remove comm calls from playback list
10270 Installation (dependent on order) of connectivity drivers moves system files
10279 Restarting active OB/DP causes dangerous rise in CPU usage and stays that way

Wholehog 3 v2.1 Bug Fixes *(continued)*

Other

4676 Dmx window on DP not showing info
8235 Swapping Pan/Tilt slowness and error
8389 Internal keyboard does not work
8818 Toggling keyboard shortcuts with the Pause key crashes desktop
8900 LTC Input Test Crashes
8964 new help items missing graphics
9281 Can not enter symbols from keyboard
9652 MSC control panel changes do not take affect until show reloaded
9755 New ELO touchscreens do not allow for held button presses
9876 Found Touchscreens list does not populate
10261 Console: Internal Keyboard fails to open a second time
10262 OB Crash when change type
10275 Certain cloning operations croak OB
10300 Changing preferences then pressing OK when programmer window open fails
10319 Apply and okay buttons not graying out after hitting apply in console settings window
10331 Using View Cue button with Scenes causes FPS Error
10382 GM and FULL Keyboard Shortcuts broken on Console
10400 Add link to French Help
10406 Update Wholehog 3 User Manual to v2.1
10410 Desktop croaker running abusive show
10418 User Manual should clearly explain Pig + @ unpatches only when in View by DP

Library

8117 Technobeam labeling problems
8464 DL2 Objects incorrect
8955 Catalyst v4 should have slots toolbar for Colour Fx
9246 Wrong v3 library files included in Hog 3PC
10018 Request for more Pearl River Libraries
10019 Request for more Alkalite libraries
10022 Add additional Fine Art Libraries
10081 Technobeam gobo wheels should not have offsets
10335 DL2 library does not allow numeric selection of Visual Mode
10350 Library - Fixture Name Errors
10351 Library - Duplicate Martin MAC TW1 Extended Fixture
10395 Add library for American DJ DJ Spot 250
10423 Add VL3500 Colour slot names
10453 Add DL.2 Effect mod 2 DMX entry ability
